

Phase 8: Project Demonstration Phase

8.1 Demonstration Plan & Execution

The objective of this phase is to demonstrate the end-to-end automated workflow execution, from user request submission to support task generation.

8.2 Step-by-Step Demonstration Execution

Request Submission User:

Navigate to Service Catalog > Maintain Items > Standard Laptop.

Click on Try It and submit the order by clicking Order Now.

Note the generated Request Number (REQ) and Requested Item Number (RITM).

Automated Flow Execution:

Upon order placement, ServiceNow triggers the Standard Laptop task flow via Flow Designer.

The flow bypasses manual approval and creates an active Catalog Task automatically.

Task Verification & Result:

Navigate to Service Catalog > Catalog Tasks (sc_task).

Open the newly generated task linked to the submitted RITM.

Verification Outcomes:

Short Description: Matches Laptop need to Configured.

Assignment Group: Successfully routed to Hardware.

Approval Status: Verified as Approved.

8.3 Demonstration Summary Table

Demonstration Step	Expected Outcome	Actual Result	Status
Request Submission	User orders Standard Laptop via Service Catalog	REQ & RITM generated successfully	PASS
Flow Triggering	Standard Laptop task flow triggers automatically	Flow executed under System User	PASS
Task Generation	Catalog Task created with specified attributes	sc_task created with Hardware assignment & Approved status	PASS
