

Project Initialization and Planning Phase

Define Problem Statements (Customer Problem Statement Template)

Date	23/09/2026
Team ID	SWTID-2026-3089
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Institution	Arignar Anna College Code: MSU 302
Team Members	Aldhaf F (Leader), Bhuvanasri S, Dhanisha Muhi N S, Divya Lakshmi K, Dharshini P
Maximum Marks	3 Marks

1. Executive Problem Statement

The current IT procurement process lacks efficiency and automation, resulting in delays and manual overhead, particularly in handling standard laptop orders. Requests for standard laptops often require configuration, but this step is prone to oversight or delay, leading to frustration among users and inefficient resource allocation within the IT department.

2. User Story

"As a member of the IT procurement team, I want a streamlined process for ordering standard laptops so that tasks are automatically generated and assigned to the hardware team for configuration. This will ensure that laptops are promptly configured upon arrival, reducing user wait times and minimising manual intervention."

3. Project Objectives

1. Create a seamless experience for users requesting standard laptops by ensuring timely configuration.
2. Reduce manual intervention and potential errors in the procurement process.
3. Improve resource utilisation within the IT department by optimising task allocation.
4. Enhance overall efficiency and productivity in IT procurement operations.

4. Customer Problem Statement Analysis

The Customer Problem Statement framework allows the team to empathize with various stakeholders affected by the procurement bottleneck — including IT Procurement Specialists, Hardware Engineers, and End Users.

PS No.	I am (Stakeholder)	I'm trying to	But	Because	Which makes me feel
PS-1	An IT Procurement Team Member managing hardware requests	Automate the standard laptop procurement workflow so configuration tasks are generated and assigned immediately upon approval.	Tasks must be created manually, assigned to the Hardware group, and populated by hand after request approval.	The legacy procurement setup lacks automated triggers linking Service Catalog approvals to Catalog Task generation.	Overwhelmed by repetitive administrative overhead, anxious about forgotten tasks, and frustrated by delays.
PS-2	A Hardware Support Engineer configuring laptops	Promptly configure laptops upon arrival and deliver them to users without backlog accumulation.	I only discover approved laptop requests through sporadic emails or when users escalate.	There is no automated dispatch mechanism assigning tasks to the Hardware group queue with standard instructions.	Reactive, rushed, and burdened with uneven workload spikes.
PS-3	An Employee / End User requesting a laptop	Receive a ready-to-use standard laptop quickly to begin my project work without interruption.	My approved request sits idle in the system for several days before configuration even begins.	Handoffs between procurement approval and hardware configuration are manual and unmonitored.	Impatient, unproductive, and dissatisfied with internal IT turnaround.
