

Empathy Map Template

Date	23/09/2026
Team ID	SWTID-2026-3089
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Institution	Arignar Anna College Code: MSU 302
Team Members	Aldhaf F (Leader), Bhuvanasri S, Dhanisha Muhi N S, Divya Lakshmi K, Dharshini P
Maximum Marks	4 Marks

Overview & Persona Definition

An empathy map provides deep insight into our key stakeholder — the IT Procurement Team Member & Hardware Support Engineer — examining their perspective across four core dimensions: Says, Think, Do, and Feel.

TARGET PERSONA: IT Procurement Team Member & Hardware Support Engineer

Role / User Type: Internal IT Service Operations Staff managing laptop fulfillment in ServiceNow

Four Quadrants of Empathy

SAYS (What they express aloud) • "I have to manually create and assign a catalog task every time a laptop order gets approved." • "Why can't the hardware team be notified immediately when a standard laptop is ordered?" • "End users constantly escalate their tickets asking where their laptops are." • "We need an automated workflow in ServiceNow so orders don't get stuck in the queue." • "Manual hand-offs between procurement and hardware lead to delays and human errors."	THINKS (What goes through their mind) • "Manual data entry is prone to human oversight and missed configuration details." • "Our IT department has ServiceNow Flow Designer — we should automate this entire path." • "If tasks auto-assign to the Hardware group, configuration can start without delay." • "Automating routine laptop requests will free up our team for strategic IT initiatives." • "Standard laptop requests follow a predictable pattern and shouldn't require manual steps."
DOES (Concrete behaviors and actions) • Checks the Service Catalog queue daily to see which laptop requests got approved. • Manually navigates to Requested Items and creates a new Catalog Task record. • Types the short description 'Laptop need to Configured' and assigns it to 'Hardware'. • Chases hardware technicians via email or chat to confirm whether configuration started. • Monitors request statuses across multiple ServiceNow screens and responds to escalations.	FEELS (Emotions and internal state) • Frustrated by repetitive administrative overhead and manual tracking. • Stressed by end-user escalations regarding delayed equipment delivery. • Apprehensive that an approved order might slip through unnoticed. • Constrained by inefficient hand-offs and lack of automated routing. • Motivated to implement a streamlined Flow Designer workflow that delivers seamless fulfillment.

Pains vs. Gains Summary

PAINS (Obstacles & Frustrations)	GAINS (Needs & Desired Outcomes)
---	---

- High turnaround time for standard laptop delivery.
- Repetitive manual effort creating tasks in ServiceNow.
- Lack of standardized hand-off between procurement and hardware teams.
- Risk of human oversight leading to forgotten configuration requests.
- Inefficient resource allocation within the IT department.

- 100% automated task creation upon request approval.
- Instant routing to the Hardware assignment group with pre-filled details.
- Drastic reduction in user wait times and faster onboarding.
- Transparent end-to-end status tracking in ServiceNow.
- Enhanced overall efficiency and productivity in IT procurement operations.
