

Problem-Solution Fit Canvas

Date	23/09/2026
Team ID	SWTID-2026-3089
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Institution	Arignar Anna College Code: MSU 302
Team Members	Aldhaf F (Leader), Bhuvanasri S, Dhanisha Muhi N S, Divya Lakshmi K, Dharshini P
Maximum Marks	5 Marks

Problem-Solution Fit Canvas Framework

The Problem-Solution Fit Canvas ensures that the proposed ServiceNow Flow Designer automation directly tackles the root causes, behaviors, and constraints of IT procurement stakeholders.

No.	Canvas Dimension	Project Analysis & Alignment
1	Customer Segment(s) [CS]	- IT Procurement Specialists managing hardware requisition lifecycles. - Hardware Support Engineers responsible for laptop staging and software configuration. - Enterprise Employees / Requesters needing configured laptops.
2	Problems / Pains + Frequency [PR]	- Unacceptable procurement delays due to manual task assignment. - Configuration tasks are forgotten or delayed post-approval. - Repetitive administrative workload. - Frequency: Daily occurrence on every approved standard laptop order.
3	Triggers to Act [TR]	- Surges in new employee onboarding requiring rapid laptop deployment. - Enterprise hardware refresh initiatives. - Escalations from department heads regarding provisioning delays. - IT SLA breaches on hardware fulfillment metrics.

4	Emotions Before / After [EM]	• Before: Frustrated by tedious manual task creation, anxious about forgotten tickets, overwhelmed by user inquiries. • After: Confident, relieved, empowered by automatic task dispatch and transparent queue visibility.
5	Available Solutions: Pros & Cons [AS]	• Manual Email/Ticket Entry: Pro: Zero setup; Con: Error-prone, massive delays, unscalable. • Custom JavaScript Business Rules: Pro: Flexible; Con: High code maintenance, brittle during upgrades. • ServiceNow Flow Designer: Pro: Native no-code automation, immediate trigger upon approval, zero code maintenance, robust logging; Con: Requires initial configuration.
6	Customer Limitations [CL]	• Restricted to corporate ITSM platform (ServiceNow) without additional software licensing budget. • Must adhere to strict IT security governance and elevated System User permissions. • Solution must run seamlessly without requiring end-user retraining.
7	Behavior + Its Intensity [BE]	• Technicians manually check approval records multiple times a day. • Procurement staff manually type task descriptions and assign groups. • Intensity: High, repetitive, resource-draining manual effort.
8	Channels of Behavior [CH]	• Online: ServiceNow Service Portal, Service Catalog, Flow Designer, Task lists, Email alerts. • Offline: Physical IT hardware depot, staging benches, laptop delivery desk.
9	Problem Root Cause [RC]	• Structural gap between request approval and task dispatching: Service Catalog items historically lacked an automated process engine binding to auto-create and route configuration tasks upon approval.
10	Your Solution [SL]	• Implementation of a dedicated ServiceNow Flow ('Standard Laptop Task') triggered by Service Catalog approvals that automatically generates a Catalog Task with Short Description 'Laptop need to Configured' and assigns it to 'Hardware' group.
