

Project Initialization and Planning Phase

Project Proposal (Proposed Solution) Report

Date	23/09/2026
Team ID	SWTID-2026-3089
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Institution	Arignar Anna College Code: MSU 302
Team Members	Aldhaf F (Leader), Bhuvanasri S, Dhanisha Muhi N S, Divya Lakshmi K, Dharshini P
Maximum Marks	5 Marks

Executive Proposal Summary

This proposal report outlines the design and implementation of an automated IT procurement and hardware staging solution utilizing ServiceNow Flow Designer. By replacing legacy manual task creation with an event-driven workflow, standard laptop orders are seamlessly fulfilled without administrative latency, oversight, or human error.

1. Project Overview

Dimension	Specification Details
Objective	The objective of this project is to implement an automated workflow using Flow Designer to facilitate the procurement and configuration of standard laptops. Specifically, it aims to: 1. Create a seamless experience for users requesting standard laptops by ensuring timely configuration. 2. Reduce manual intervention and potential errors in the procurement process. 3. Improve resource utilisation within the IT department by optimising task allocation. 4. Enhance overall efficiency and productivity in IT procurement operations.

Scope	The project comprehensively automates the standard laptop lifecycle within ServiceNow: self-service catalog ordering, managerial approval routing, automatic Catalog Task generation, assignment to the Hardware team queue, and end-to-end audit tracking across the ITSM platform.
--------------	--

2. Problem Statement

Aspect	Problem Context & Impact
Description	The current IT procurement process lacks efficiency and automation, resulting in delays and manual overhead, particularly in handling standard laptop orders. Requests for standard laptops often require configuration, but this step is prone to oversight or delay, leading to frustration among users and inefficient resource allocation within the IT department.
Impact	Addressing these issues eliminates provisioning bottlenecks, ensures hardware technicians receive configuration tasks immediately upon order approval, minimizes user wait times, and maximizes IT productivity across enterprise operations.

3. Proposed Solution Architecture

Solution Component	Technical Details
Approach	Employing ServiceNow Flow Designer (Process Automation) in Global application scope, executing in System User context to automatically create and route Catalog Tasks upon Service Request approval.
Key Features	• Triggered automatically via Service Catalog on Standard Laptop orders. • Dynamic drag-and-drop binding of Requested Item record data to Catalog Task. • Auto-population of Short Description and Description as 'Laptop need to Configured'. • Automatic assignment to 'Hardware' group and initial state set to 'Approved'. • Zero custom code maintenance, full ITIL v4 compliance, and transparent audit tracking.

4. Resource Requirements

Resource Type	Description / Subsystem	Specification / Allocation
---------------	-------------------------	----------------------------

Computing Resources	Cloud ITSM Instance / Client Hardware	ServiceNow Personal Developer Instance (PDI) / Enterprise Cloud; Client PC: Dual-Core CPU, 8 GB RAM
Memory	Client / Browser RAM Allocation	8 GB RAM minimum for smooth ServiceNow Studio and Flow Designer builder operation
Storage	Cloud Relational Database Storage	ServiceNow Enterprise Cloud Managed Storage for catalog items, tables, logs, and audit histories
Platform & Tools	ITSM & Process Automation Engine	ServiceNow Platform (Washington DC / Vancouver Release)
Workflow Modules	Flow Designer & Catalog Builder	Flow Designer (Global Scope), Service Catalog (Hardware Category), Maintain Items (`sc_cat_item`)
Development Environment	Browser-based Low-Code IDE	ServiceNow Studio & Flow Designer Web Interface (Google Chrome / Mozilla Firefox)
Data & Schemas	Relational Database Records	ServiceNow Data Records: `sc_req_item`, `sc_task`, `sys_user`, `sys_user_group` (Hardware Team)
