

Phase 2: Requirement Analysis Phase

2.1 Objective

The primary objective of this phase is to define the functional and technical requirements for automating the Standard Laptop request and fulfillment process in ServiceNow using Workflow Studio (Flow Designer).

2.2 Functional Requirements

Catalog Item Trigger: The flow must automatically trigger whenever an end-user submits an order for the Standard Laptop item via the Service Catalog.

Automated Task Creation: Upon request submission, the system must generate a Catalog Task for IT support.

Task Fields Configuration:

Short Description: Must be populated as Laptop need to Configured.

Description: Must contain detailed instructions as Laptop need to Configured.

Assignment Group: Must automatically assign the task to the Hardware team.

Approval Status: The task approval state should be automatically set to Approved.

2.3 Technical Requirements

Platform: ServiceNow Personal Developer Instance (PDI).

Tool: Workflow Studio / Flow Designer (Process Automation).

Execution Context: The flow must execute under the System User security scope.

Application Scope: Global.
